

Frost Protection Chilled & Boosted water

Trace Heating Projects Ltd have recently completed a large frost protection project of chilled and boosted water pipe work at Wellington Place Leeds.

The installation of self-regulating heating cable was installed on the external roof pipe work to prevent freezing in sub- zero temperatures. Frozen pipes can be a costly problem, when exposed to sub-zero conditions they can burst, leading to considerable damage and disruption.

The Self-Regulating heating cable, combined with Adequate thermal insulation, intelligent control systems prevents freezing and provided the customer with a cost effective solution.
