

### Process Temperature Maintenance

Trace Heating Projects Ltd have recently completed major trace heating replacement project for New Britain Oils on Liverpool docks supplying and Installing over 2000m of Raychem's XTV family of self-regulating parallel circuit heater cable.

The customer had been experiencing problems with the existing system for a number of years and contracted Trace heating projects to design, supply and install a new system to include Raychem heater cable ,control panel, power and control circuits.

The project was part of a 250k refurbishment project to update and replace existing heater cables used to maintain essential pipe lines necessary for the manufacture of Palm oil. New Britain Oils imports Raw materials from sustainable resources in Papua New Guinea and employs almost 100 staff at its refinery plant on Bootle's Regent Road, Liverpool.
