

Shakespeare's School Room & Guildhall

The building was constructed in 1420 and originally housed the Guild of the Holy Cross.

However the upper floor of the Guildhall became the main schoolroom at King Edward VI School in 1568 and is now most famed as the place where a young William Shakespeare was taught.

The hall would have been a big part of the playwright's life, not only being the place he learned, but also the building where his father John Shakespeare, who was one of the first bailiffs of Stratford, governed the town.

The Guildhall may even have been the place where Shakespeare watched his first theatre performance, when the travelling theatre troupes the Queens Men and the Leicester's Men came to perform.

Trace Heating Projects Ltd have proudly completed a project supplying and installing Raychem's T2 Blue underfloor heating system. The project required a heating system that blended in to unique surroundings of this historical building, Raychem's T2 blue was the perfect solution.

T2 Blue 20 W/m is a floor heating cable with constant power output of 20W/m, it's a pre-terminated dual conductor heater.

The flexible underfloor heating cable was installed directly on to the screed and embedded beneath the original tile stone floor.

Raychem smart thermostats will help to achieve extra low energy consumption.
